

ATTENTION HOME BUILDERS

STOP SEWAGE BACKFLOW!!

Please be sure to consult with your building contractor and plumber to discuss the need for a backflow check valve between your new house and the sewer connection. This is extremely important for any home on property that has any flood level rim below the elevation of the next upstream manhole cover of the sewer system. Even though you may not need a sewage pump system, you may need a backflow valve. Please make sure to check if this is necessary for your lot, or you run the risk of having sewage forced into your house from the sewer system, especially during the North Shore's heavy rains.

If you have any questions, please contact the Facilitator of the Princeville Community Design Committee at 826-6687.
