

# Princeville at Hanalei Community Association

## Princeville Community Design Committee (CDC)

### Mailbox Guidelines

The Post Office is offering the following three types of mail service to the Princeville homeowners:

1. Individuals may retain their existing Post Office Box at the Post Office;
2. Individuals may cancel their Post Office Box, and have their mail delivered to a mailbox located at your property;
3. Individuals may have both home and Post Office Box delivery. Mail addressed to the Post Office Box will be delivered to that Box; and, mail addressed to the home address will be delivered to the mailbox located at your property.

Delivery to Single Family Residences will be to a mailbox that is situated on a post, located by the driveway. (See Diagram 'A' below for exact setbacks and location)

The CDC has approved two different mailbox styles: (See Diagram 'B' below)

- Option One: LP12—Black, with a lock;
- Option Two: PL10B—Black, that is a standard rust proof box.
- Both are to be mounted on a white plastic pole identified as PP400.

Installation is very simple and quick. Per the U.S. Post Office, your street numbers are to be on the side of the mailbox and must be 2 inches high. Note: Both types of approved mailboxes are available at Island Ace Hardware in Princeville.

Multi-family Properties: To take advantage of the new postal service, Multi-Family properties must procure and install CDC approved cluster-type mailboxes at their own expense. The cluster boxes must be installed according to U.S. Postal Service specification, and must be located entirely within the multifamily property. Installation plans must first be approved by the U.S. Postal Service, then reviewed by the CDC prior to commencement of the installation. Please contact the Postal Service directly to obtain their installation specifications, and also for any additional information concerning the use of the cluster mailboxes.

The CDC has approved American Lock Security Systems Cluster Box Units for use at Princeville multifamily properties. These cluster boxes are constructed of heavy gray plastic to withstand the salt air and other corrosive effects. These particular cluster boxes are said to be more secure than conventional aluminum boxes.

## MAILBOX LOCATION (DIAGRAM A)

The Community Design Committee met with the US Postal Service from Honolulu. The USPS has requested that mailboxes be installed as follows:

Throughout Princeville, with the exception of Mili Makani and Kauhale Park subdivisions, boxes are to be located 17 feet from the roadway and 18 inches from the edge of the driveway. The box can be on either the right or left side but must open towards the driveway, not the road.

In Mili Makani and Kauhale Park the boxes are to be located 13 feet from the roadway and 18 inches from the edge of the driveway. The box can be on either the right or left side but must open towards the driveway, not the road.

Mail boxes can be right or left but must be visible to the mail carrier
